

****kwargs: When Customers Give Special Instructions**

Now, a customer says, "Extra cheese on pizza, spicy pasta, less mayo on burger." ****kwargs** handles these named instructions.

Code:

```
def make_food_order_with_instructions(**kwargs): print("Customer's special instructions:") for item, instruction in kwargs.items(): print(f"{item}: {instruction}")
```

Customer's order

```
make_food_order_with_instructions( pizza="extra cheese", pasta="spicy", burger="less mayo" )
```

Output:

Customer's special instructions: pizza: extra cheese pasta: spicy burger: less mayo

Explanation:

****kwargs** is another basket, but for named items. Each food item is paired with its instruction, like `pizza="extra cheese"`.
